

# UNDER CONSTRUCTION

While this Clinical Care Model document is being revised, it is temporarily removed from circulation.

If you would like to be automatically notified when this document is updated, you can subscribe to it. In OnBase (document retrieval mode), select [Process](#) > Workflow System Tasks > Manage Subscription.

Presbyterian's Clinical Care Model is an enterprise-wide collection of custom-written summaries, intended to encourage collaboration, to articulate highly reliable processes, and to provide evidence-based guidance for delivering safe, high quality, compassionate, and equitable care.

A Care Model document can:

- Serve as a touchstone for leaders and clinicians to understand the programs and processes that may affect their practice
- Focus a care team on process improvement
- Illustrate care pathways for the benefit of EHR design
- Enhance PHS' ability to replicate clinical programs and services throughout our system and with external partners
- Help with adherence to policies and procedures

Four formats serve different purposes:

- a broad clinical **approach** – e.g., [Antimicrobial Stewardship](#)
- an abstract of a clinical **program** – e.g., [Patient Centered Medical Home](#)
- a summary of a healthcare **process** – e.g., [HCC](#)
- a **clinical practice model (CPM)** with evidence-based guidelines to support clinical decision making – e.g., [Chronic Opioid Therapy for Chronic Pain](#)
