

## Preventive Medications List, 2022

The following preventive medications and products may be available to you with no cost-sharing (copay, coinsurance and/or deductible) depending on your plan. Preventive medications are used for the management and prevention of complications from conditions such as high blood pressure, high cholesterol, diabetes, asthma, osteoporosis, heart attack and stroke. Below is a list of preventive medications and the conditions they are used to treat. Additionally, the Patient Protection and Affordable Care Act (PPACA) requires that certain categories of drugs and other products be included in preventive care services. For preventive medications (including over-the-counter medications) or products to be covered, a pharmacy claim will need to be submitted. Present your ID card to the dispensing pharmacy for processing and billing information.

**Please note:** The proprietary name (Brand Name) is given as reference information only. *If there is a generic form of the preventive medication available, only the generic will be considered for coverage at zero copay.*

If you have questions, you can call the Presbyterian Customer Service Center at Presbyterian at 505-923-5678 (toll free at 1-800-356-2219) TTY 711. Representatives are available Monday through Friday 7:00 a.m. to 6:00 p.m.

Anti-cholesterol agents PPACA high triglycerides and cholesterol, heart attack	Statins	<i>atorvastatin</i> <i>lovastatin</i> <i>pravastatin</i> <i>simvastatin</i>	Statins are used to lower your “Bad” cholesterol (LDL) and increase your “Good” cholesterol (HDL). They help decrease your risk of heart disease. Statins should be taken at bedtime, because your body produces cholesterol while you are sleeping. They can cause muscle pain and weakness, it is important to report these symptoms to your provider. With some of these statins you cannot take grapefruit juice.
